

Multi-Shop & Branch Management Platform

One platform for multiple shops: sales, inventory, accounts, shipments, analytics and complete management control.

Live Operations

Inventory & Accounting

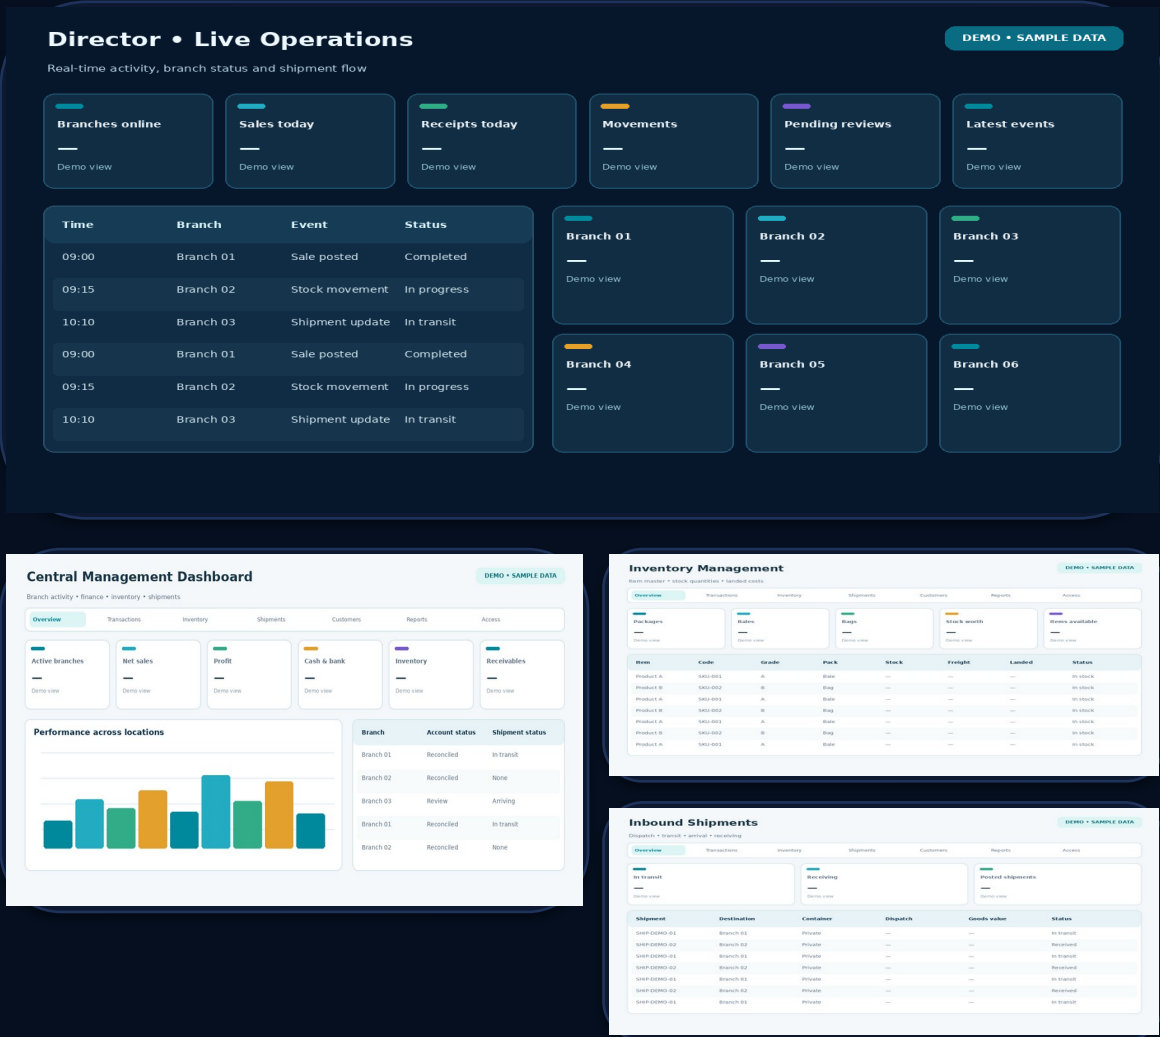

Shipment Control

Manage multiple shops in the same city, across a country, or internationally — with clear visibility into sales, stock, accounts and performance.

Audit & Access

Commercial Presentation

Illustrative demonstration views • all data synthetic

Run Every Shop From One Platform

Designed for multiple locations — one city, one country, or an international network. Start small and scale with confidence.

Executive visibility

See network activity, financial KPIs, shipments, and problem flags from head office in one place.

Shop operations

Each shop operates with structured transactions, receivables, inventory, expenses, and remittances.

Commercial discipline

Track pricing, margins, profitability, and below-cost selling risk at item-by-item level.

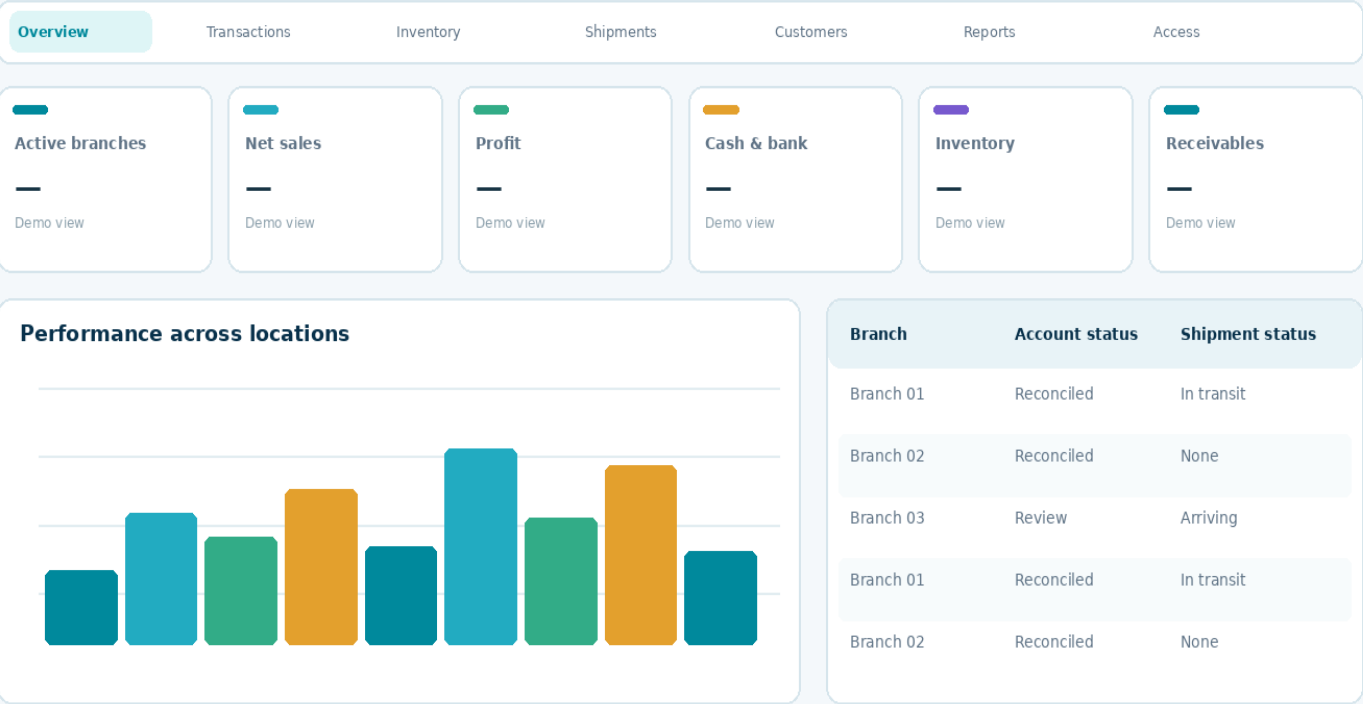

Governance & control

Role-based access, audit trail, approvals, and system-health checks keep operations accountable.

Central Management Dashboard

DEMO • SAMPLE DATA

Branch activity • finance • inventory • shipments

Central Management Command Center

View sales, stock, cash, receivables and operational exceptions across every branch from one dashboard.

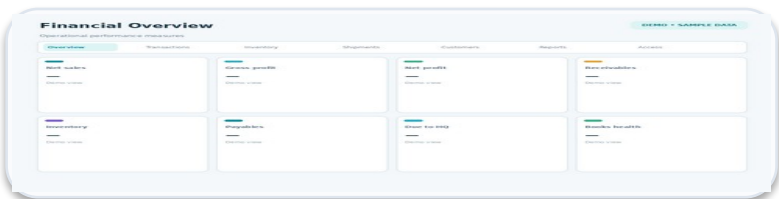

Head Office Overview

Executive KPI strip for sales, profit, cash, stock, customer dues, intercompany balances, and containers in motion.

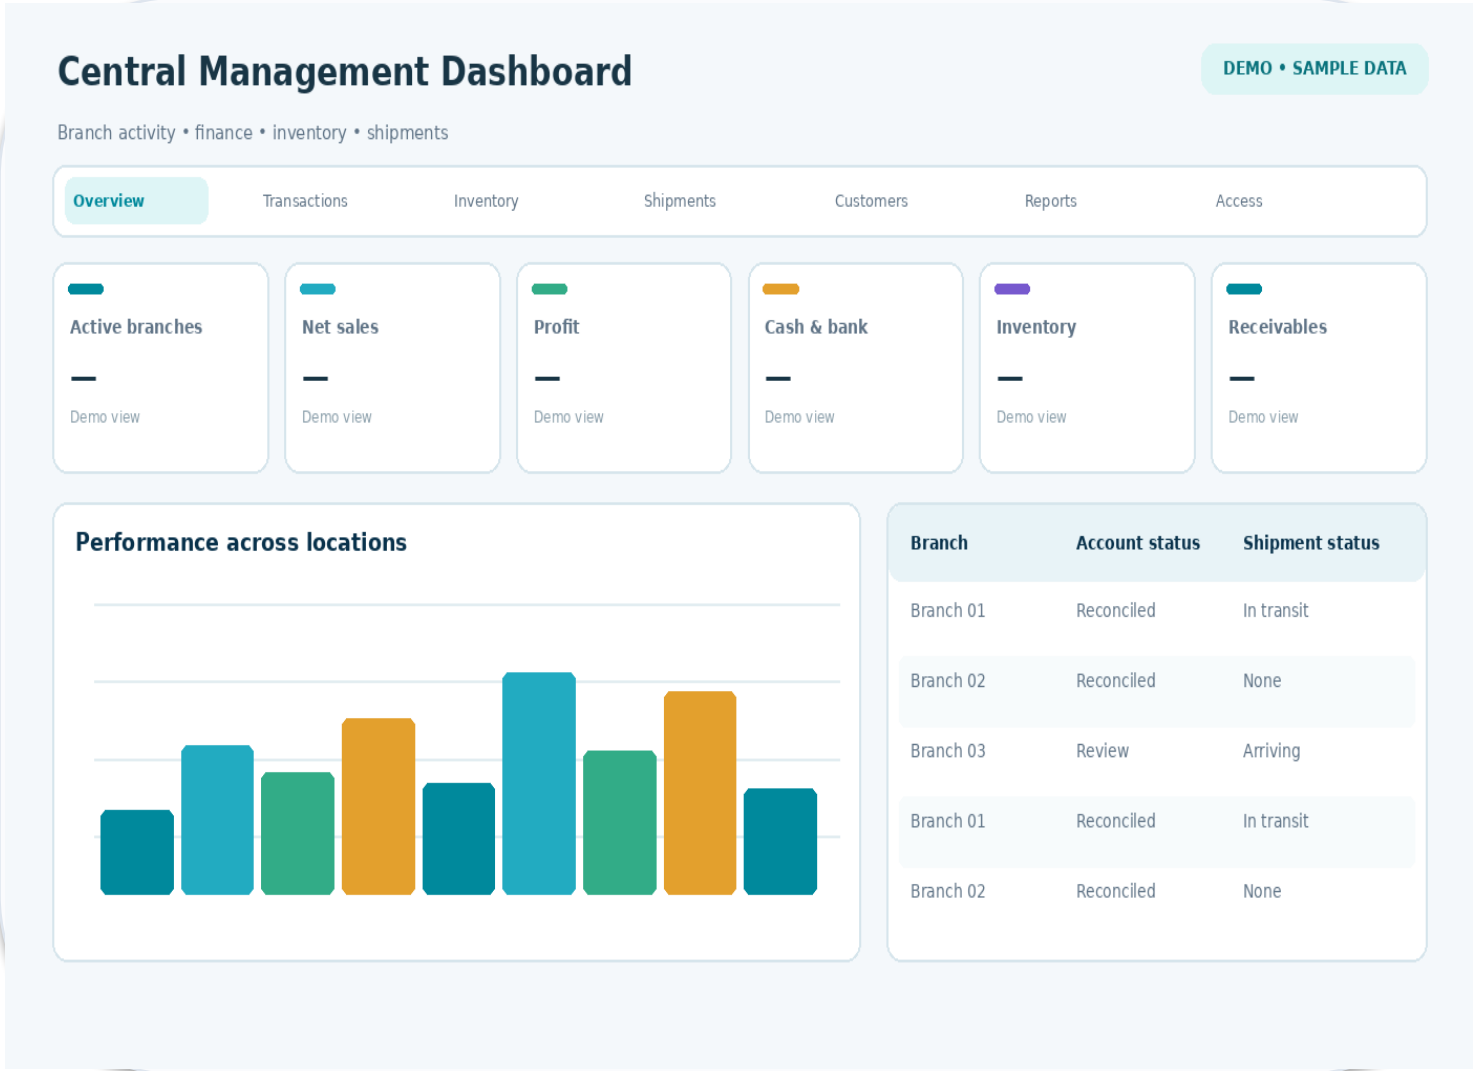

Figure-check panel re-validates posted data and highlights anomalies before they become management issues.

Branch and location cards summarize performance in a format that is easy to scan, compare, and discuss.

Auto-refresh and jump-to-shop workflow make the dashboard suitable for daily operational reviews.

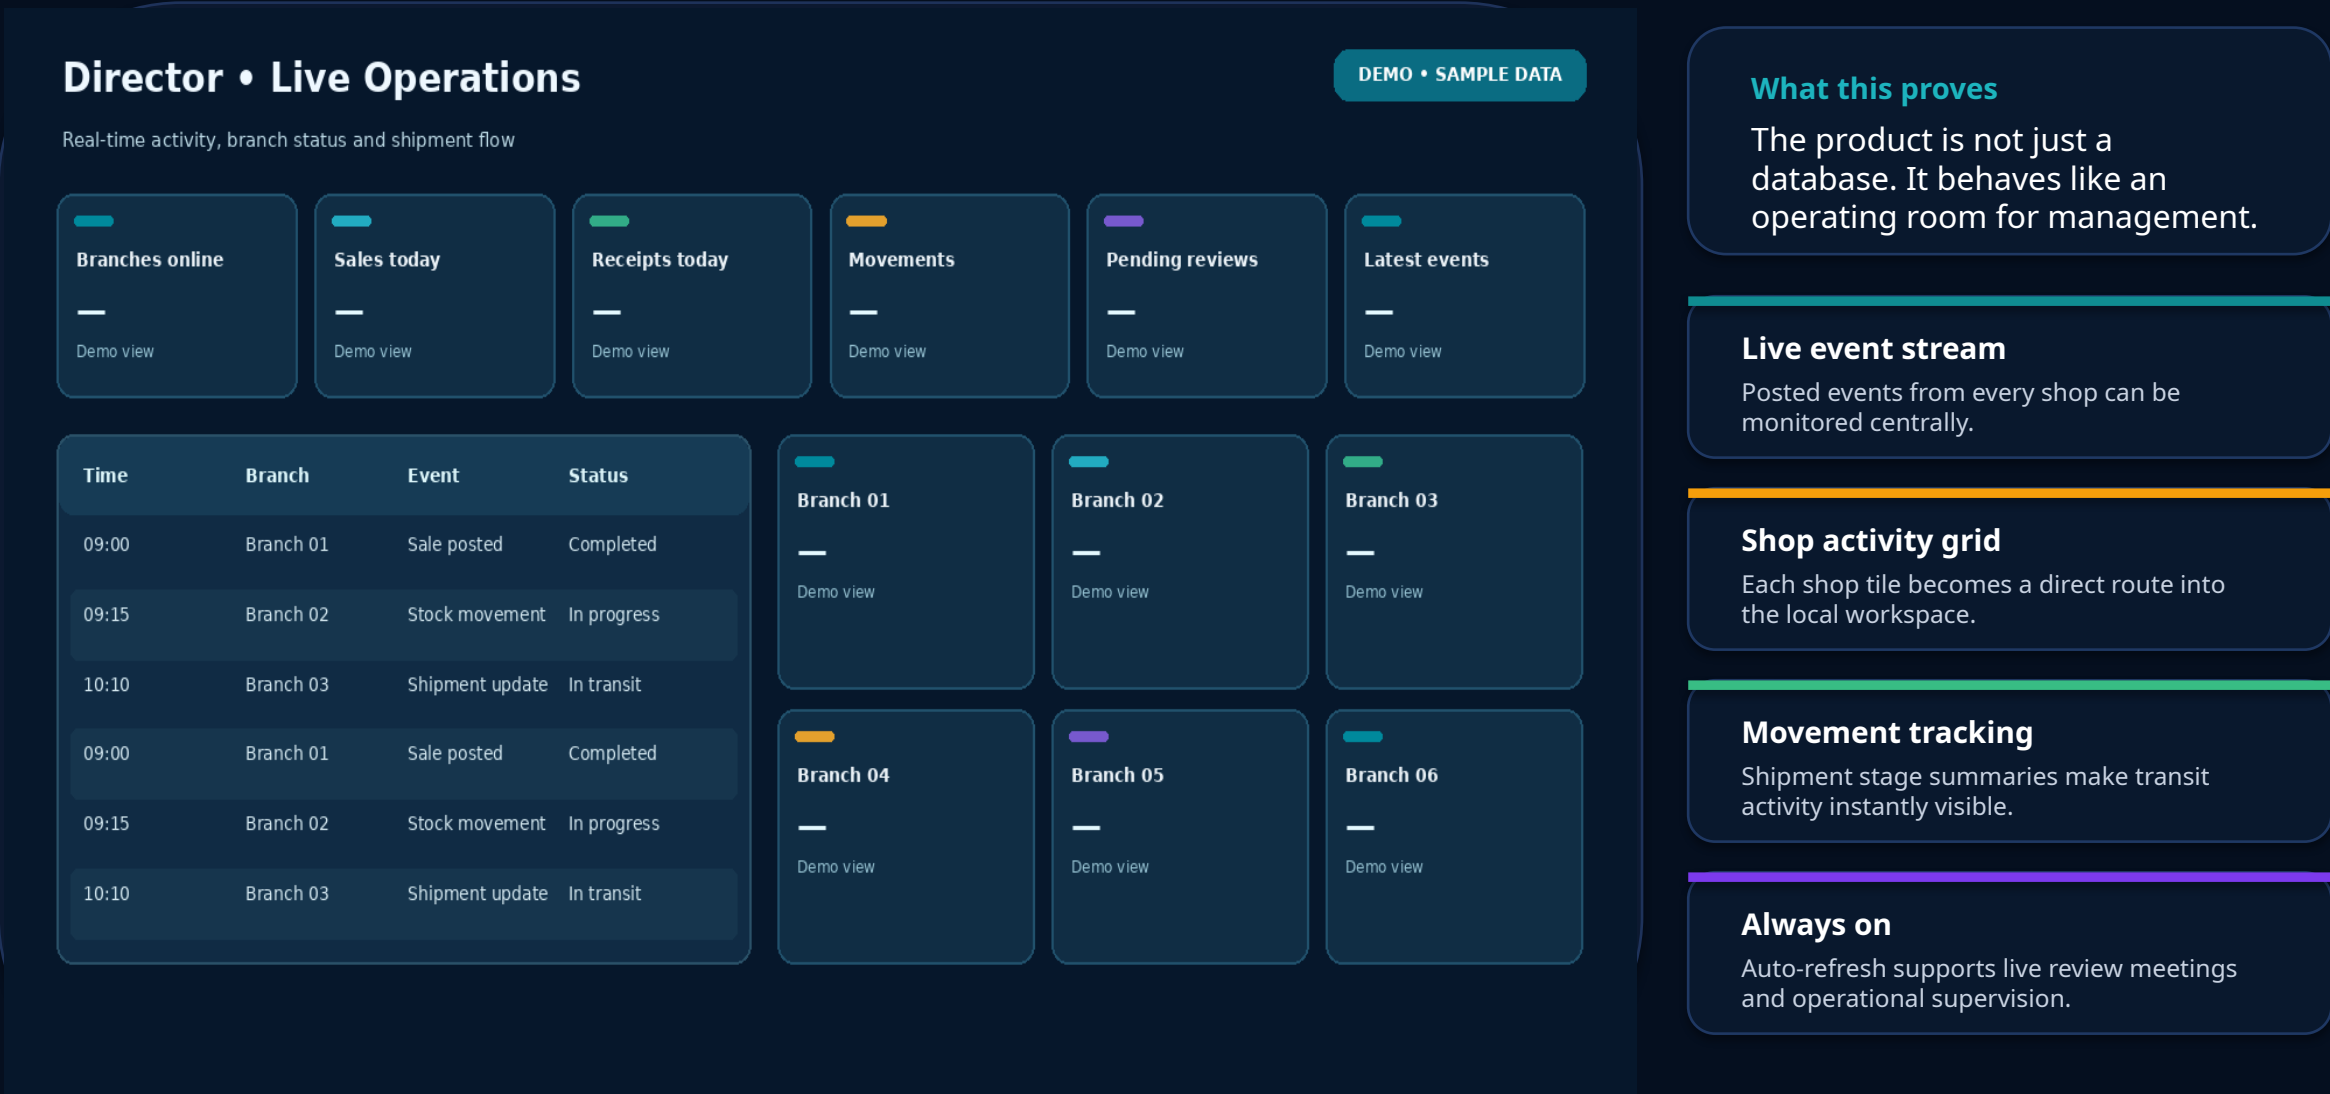

Illustrative KPI card band

Live Operations Across the Network

Real-time shop activity, event stream, shipment movement, and current shop status give leadership a live pulse of the business.

Flexible Branch Structure & Access

Organize multiple shops by city, region or country, with clearly assigned roles and secure access.

Whether two shops share a street or hundreds of branches operate across markets, keep roles, accounts and oversight organized.

Branch Accounting With Operational Context

Every shop has its own workspace for daily transactions linked to structured financial records.

1100	Accounts Receivable	Asset	—
1200	Inventory	Asset	—

Sales, receipts, expenses, returns, remittances, and adjustments are posted in a controlled flow.

Operational documents and financial impact stay connected, so reporting can be trusted.

Export-ready formats support management review, finance review, and external sharing.

Reporting Depth: Journals to Financial Statements

Managers can drill from daily activity into formal accounting outputs without leaving the platform.

Built-in outputs

Day Book • Cash Journal • Trial Balance • P&L • Balance Sheet

- 1

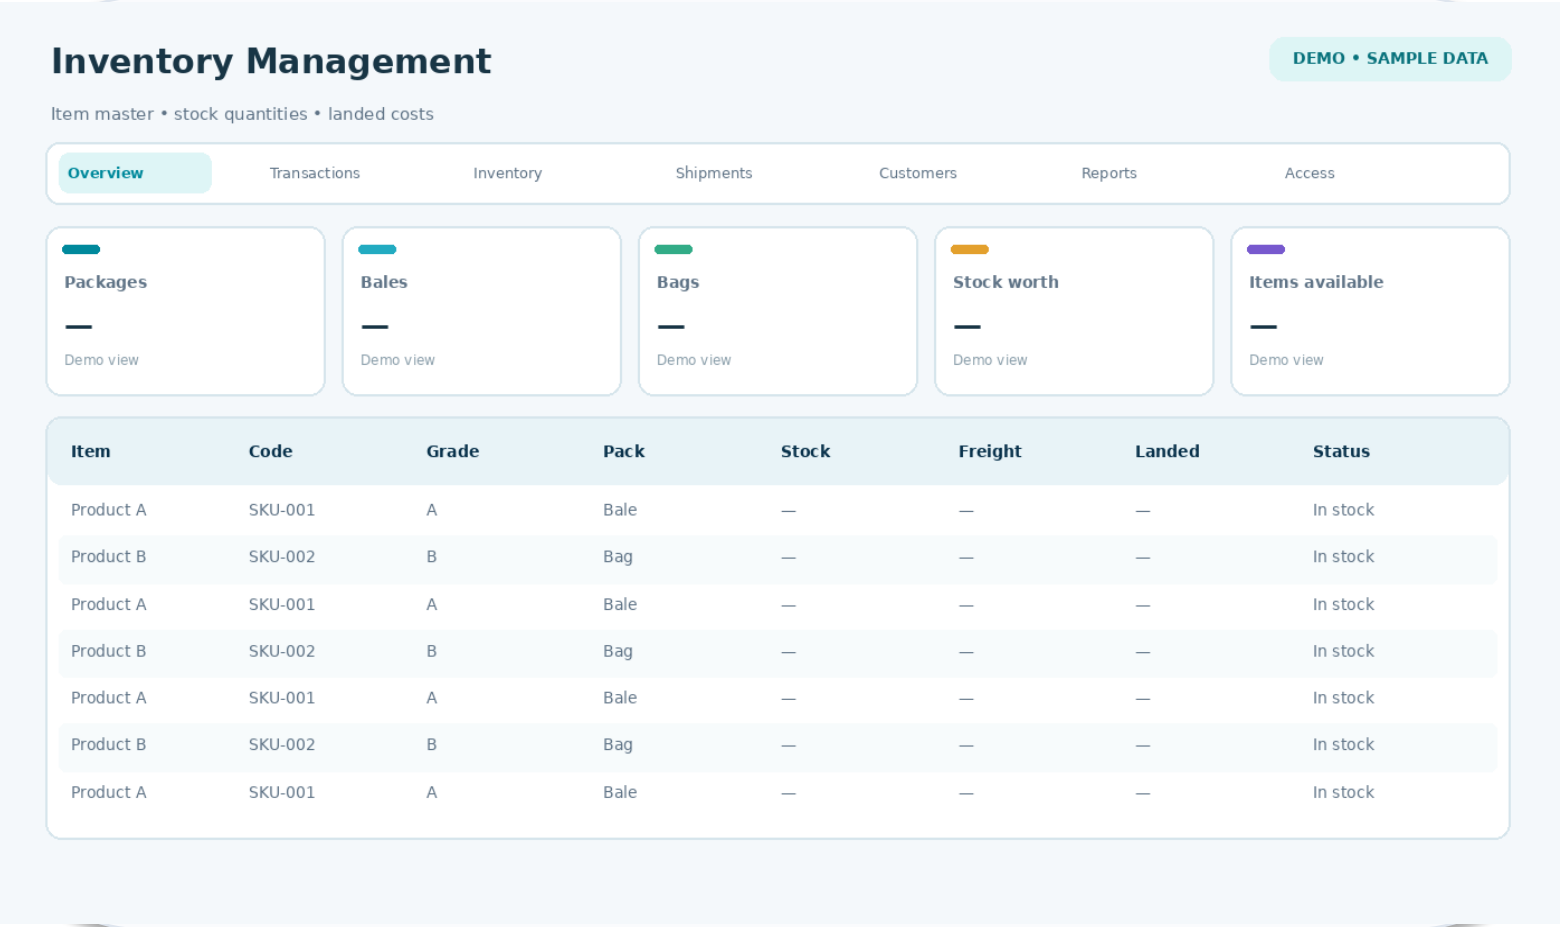

Operational data posts into books, not into disconnected spreadsheets.
- 2

Financial KPIs read from the same journal logic, improving trust in dashboard numbers.
- 3

PDF, Excel, and print outputs reduce reporting friction for field teams and HQ.

Inventory Intelligence Down to Package Level

Track packages, bales, bags, landed cost components, stock history, and margin effect at item level.

Customer Ledgers & Receivables Control

Customer records are not just names in a list — they are linked to opening balances, outstanding amounts, advances, limits, and ageing.

Customer 01	Private	—	—	—	Active

Commercial relevance

Receivables become visible early, so collection management improves before problems compound.

Opening A/R

Supports migration and controlled shop onboarding.

Outstanding

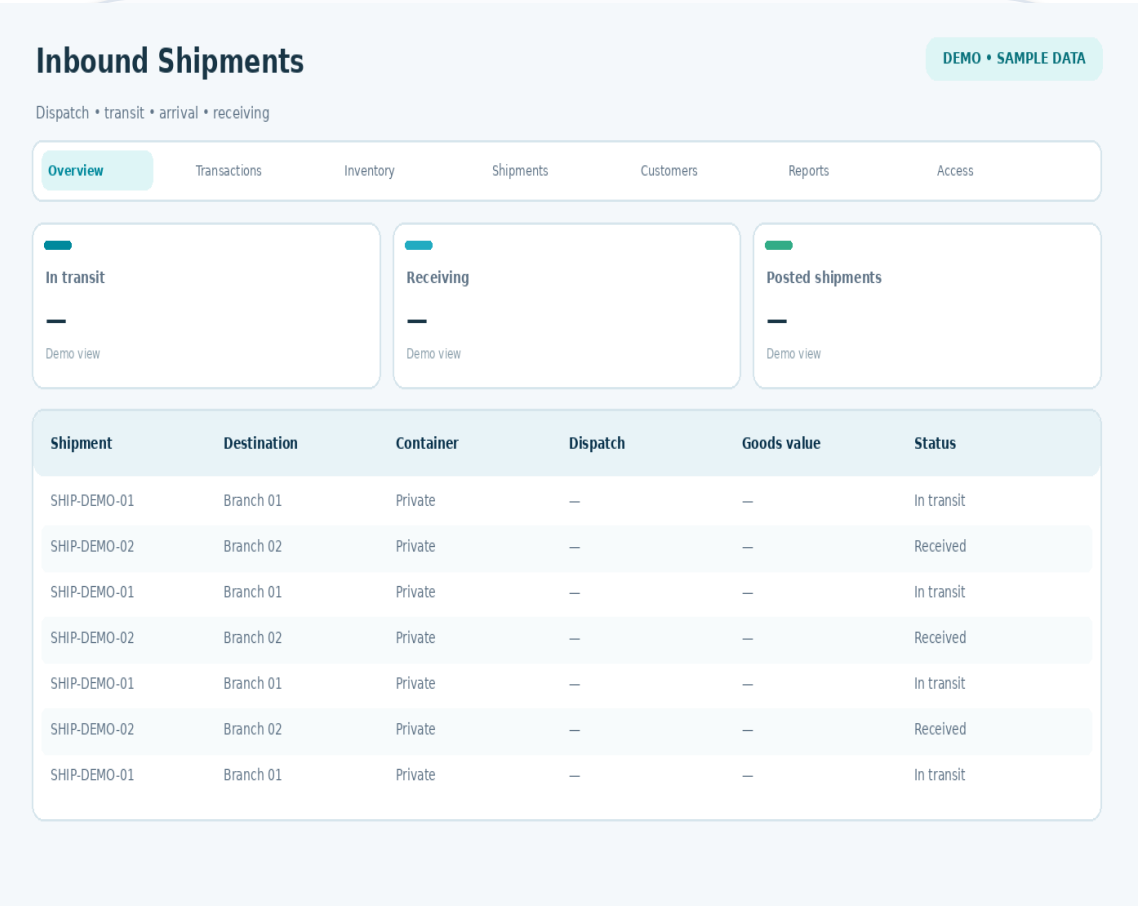

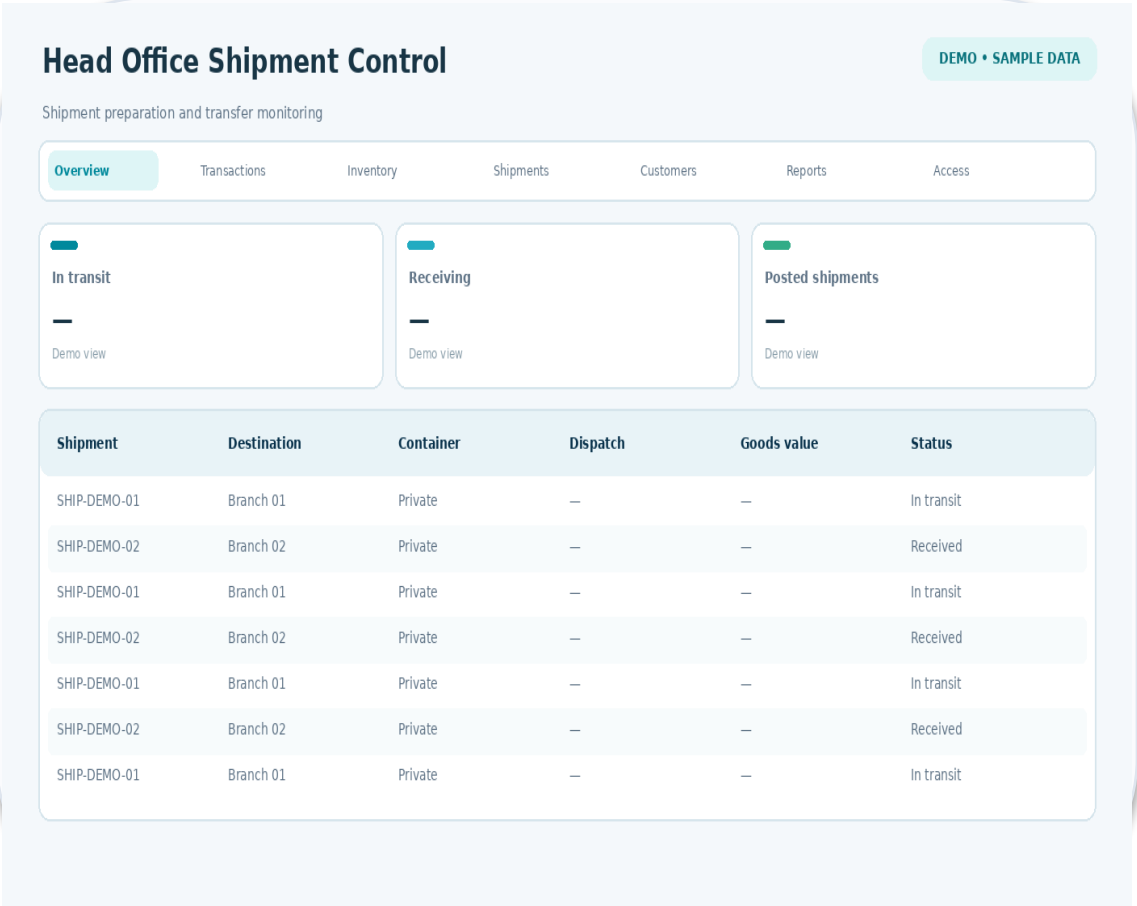

Managers can immediately see who owes what.

Advance / limit

Useful for disciplined customer handling in field environments.

Stock Movement & Shipment Control

Handle branch replenishment and stock movement, with advanced container workflows for businesses that need them.

Inbound shipment screens manage dispatch/arrival status, received value, import expense, and receive actions. Head office shipment control center ties together invoice, container, export list, barcodes, and posting state. A useful optional capability for distributors and chains handling local transfers or international shipments.

Commercial Control & Margin Protection

The product does more than record sales — it actively helps management protect margin and spot weak commercial decisions.

Audit Trail, Permissions & System Health

Strong software becomes commercially valuable when it gives leadership confidence in who did what, where, and why.

Planning Engine & Management Advisory

Beyond recording transactions, the platform supports forward planning and management decision support.

Production & Loading Planner

Strategic layer

Planning logic turns historical performance into actionable operational proposals.

Loading plans

Build structured proposals for destination shops and target weight/packages.

Commercial rules

Preserve business rules before recommendations are approved.

Insights & allocation

Blend stock, margin, and destination logic for better decisions.

Built to Grow With Your Business

Whether you operate two shops or a nationwide network, control the business without multiplying manual work.

Deep operational coverage

Finance, stock, shipments, customers, pricing, audit, and planning in one product.

From local stores to wider networks

Manage several shops in one city, expand nationwide, or coordinate branches in multiple countries.

Management-ready reporting

Dashboards and exports are ready for review meetings and business follow-up.

Commercial decision support

The software helps protect margin, control receivables, and guide stock movement.

Accountability by design

Users, approvals, audit trail, and system-health checks create governance.

White-label deployment potential

Configurable for retailers, wholesalers, distributors, franchises, and other multi-location organizations.

The screenshot displays the 'Inventory Management' dashboard with a top navigation bar and a sidebar. The main content area shows a table of inventory items with the following columns: 'Item ID', 'Item Name', 'SKU', 'Stock', 'Status', 'Unit Weight', 'Unit Price', and 'Location'. The table contains five rows of data.

The screenshot displays the 'Inbound Shipments' dashboard with a top navigation bar and a sidebar. The main content area shows a table of shipment records with the following columns: 'Shipment ID', 'Description', 'Quantity', 'Status', 'Priority', 'Location', and 'Created At'. The table contains five rows of data.

The screenshot displays the 'Audit & System Health' dashboard with a top navigation bar and a sidebar. The main content area shows a table of system health and audit logs with the following columns: 'System Component', 'Status', 'Last Check', 'Error Code', 'Location', and 'Created At'. The table contains five rows of data.
